Paper-Folding Challenge

By Ramona Heikel

Try folding a regular piece of paper in half more than eight times. Most people say it can't be done! The first fold makes the paper as thick as two pieces of paper. The second fold makes it as thick as four pieces of paper. With the third fold, it's as thick as eight pieces of paper stacked together! By the eighth fold, how thick does it get? Does it matter which way it's folded? Try it with friends. See who can make the most folds.
